Professional Height Adjustable Tables

'Concept' worktables are designed for the needs of the electronics industry, where ergonomic qualities are the most important requirement. There are many possible adjustments, all components fit together seamlessly, and each detail is practical in use.

The workstation adapts to the work process and the needs of the user. As a result all movements of the user can be optimised, which in turn increases performance and productivity and decreases work-related stress.

Modular design provides total integration with the existing system and the potential to flexibly adapt to changes in the environment. Concept worktables are typically used in work such as assembly, quality control and repair.

Concept worktables are also available in motorised and hand crank versions.
